

PRESS RELEASE

OLT Offshore LNG Toscana

OLT Terminal again in operation

Carried out the first discharge after extraordinary maintenance, FSRU Toscana 100% allocated until 2026/2027

Livorno, November 26, 2024 – OLT Offshore LNG Toscana announces the resumption of full operation of the FSRU Toscana terminal, which, after successfully completing the re-installation and reconnection to the national gas network activities and receiving an LNG cargo aimed at gassing-up and cooling-down the plant, returns to commercial operation.

With extraordinary maintenance concluded on November 24, regasification activity officially resumed on November 25, with the receipt of the first cargo of liquefied natural gas.

The FSRU Toscana terminal can receive cargoes of up to 173,250 m³ (165,000 m³ with a 5% operational tolerance on discharge) and, thanks to the Wobbe index correction system, LNG from almost all the LNG liquefaction plants, while providing its users and the system with high flexibility of injection into the grid.

Regasification capacity is currently allocated at 100%, until Gas Year 2026/2027.

OLT Offshore LNG Toscana, a company controlled by Snam and Igneo Infrastructure Partners, owns and manages the floating regasification Terminal "FSRU Toscana". The Terminal, moored about 22 km off the coast between Livorno and Pisa, is connected to the national grid through a 36.5 km long pipeline, operated and managed by Snam, of which: about 29.5 km at sea, 5 km in the floodway and the remaining 2 km on dry land. FSRU Toscana has a maximum authorized regasification capacity of 5 billion Sm³ a year.
